NyAlternate names: fin-popping peptide
CySpecies: Conus purpurascens (purple cone,)
CySpecies: Conus purpurascens (purple cone,)
CyAccession: A58997
RyTerlau, H.; Shon, K.J.; Grilley, M.; Stocker, M.; Stuehmer, W.; Olivera, B.M.
Nyture 381, 148-151, 1996
A;Tetle: Strategy for rapid immobilization of prey by a fish-hunting marine snail.
A;Reference number: A58997

Gladicose binding adhesin heavy chain - Entamoeba histolytica
C;Species: Entamoeba histolytica
C;Species: Entamoeba histolytica
C;Accession: T09229
R;Purdy, J.E.; Mann, B.J.; Shugart, E.C.; Petri, W.A.
Mol. Blochem: Parashitol. 62, 53-59; 1993
A;Title: Analysis of the gene family encoding the Entamoeba histolytica galactose-specif;
A;Reference number: 216622; MUID:94158976; PMID:8114826
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Molecule type: mRNA

probable vitellogenin receptor - fruit fly (Drosophila melanogaster)
(Species: Drosophila melanogaster
(Species: Drosophila melanogaster
(Spate: 13 Aug-1999 #sequence_revision 13 Aug-1999 #text_change 09-Jul-2004
(Scession: T13171
Rischonbaum, C.P.; Lee, S.; Mahowald, A.P.
Rischonbaum, C.P.; Lee, S.; Mahowald, A.P.
Airtle: The Drosophila yolkless gene encodes a vitellogenin receptor belonging to the low A. Rischerence number: 217627; MUID:95183490; PMID:7878005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Molecule type: mRNA
Residues: 1-1984 <SCH>

interleukin-1 beta precursor - rabbit
NAlternate names: hematopoietin-1; IL-1 beta; lymphocyte proliferation potentiating fact. C.Specias: Orycolagus cuniculus (domestic rabbit)
C;Date: 25-May-1989 #sequence_revision 22-Nov-1996 #text_change 09-Jul-2004
C;Accession: A27714, A30584; JU0082; A32166
Biochem. Biophys. Res. Commun. 150. 1237-1243, 1988
A;Fitle: Cloning and sequence analysis of a cDNA for lymphocyte proliferation potentiatir: A;Reference number: A27714; MUID:88134238; PMID:2449207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A; Molecule type: mRNA

A;Residues: 1-268 <VOU>
C;Comment: This protein lacks a conventional signal sequence for protein export. Cleavage
C;Comment: This protein-lbeta, unlike interleukin 1-alpha, is inactive.
C;Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-lal
C;Superfamily: interleukin-1
C;Keywords: cytokine; immunoregulation; inflammation; lymphokine; macrophage; mitogen
F;117-268/Product: interleukin-1 beta #status predicted <ILB>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C. Species: Caenorhabditis elegans
C. Species: Caenorhabditis elegans
C. Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 21-Jan-2000
C. Accession: T16556
R. Pauley, A. Bubmitted to the EMBL Data Library, April 1994
A. Description: The sequence of C. elegans cosmid K04C2.
A. Reference number: 218534
A. Accession: T16556
A. Reference number: 218534
A. Accession: T16556
A. Reference number: 218534
A. Accession: T16556
A. Reference is preliminary; translated from GB/EMBL/DDBJ
A. Residues: 1-194 < PAU>
A. Cession: BMBL: U000044; NID:9470346; PID:9470348; PIDN:AAAS0676.1; CESP: K04C2.1
A. Experimental source: strain Bristol N2
C. Genetios:
A. Gene: CESP: K04C2.1
A. Introns: 26/2; 85/3; 131/3
C. Superfamily: Caenorhabditis elegans hypothetical protein K04C2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hypothetical protein YUPBH12R.38 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Accession: T01055

A.Title: The lethal myospheroid gene of Drosophila encodes a membrane protein homologous
A.Reference number: A30889; MUID:88190122; PMID:3128792
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fibropellin Ia - sea urchin (Strongylocentrotus purpuratus)
NyAlternate names: epidermal growth factor homolog precursor
NyAlternate names: epidermal growth factor homolog precursor
Scholaria: alternatively spliced fibropellin Ib (EGFI)
C;Species: Strongylocentrotus purpuratus (purple urchin)
C;Date: 13-May-1992 #sequence revision 17:Sep-1997 #text_change 09-Jul-2004
C;Accession: A40136; B40136; Z40136; A29316; A43131
